

Product Manager Intern, Summer 2027

Wasatch Labs · Lehi, UT (hybrid, 3 days in office) · Internship, 12 weeks · \$32–36/hour

About Wasatch Labs

Wasatch Labs builds scheduling and payments software for 4,000+ independent clinics across the Mountain West. We are a 180-person B2B SaaS company, and our product team ships to customers every week. Many of our PMs and engineers started as BYU interns.

The role

You will own one real feature area on our patient-booking product from discovery to launch, paired with a senior PM, a designer and four engineers. Past interns shipped online check-in, waitlist auto-fill and a no-show prediction pilot.

What you will do

- Run customer interviews with clinic staff and turn what you learn into clear problem statements
- Write PRDs and user stories, and prioritize the backlog with engineering in Jira
- Define success metrics, design A/B tests and analyze results with SQL
- Work with design on Figma prototypes and run usability tests
- Present your feature and its results to the leadership team at the end of the summer

What we are looking for

- Junior or senior pursuing a degree in Information Systems, Computer Science, Business, or a related field
- Experience with SQL and data analysis (class projects count)
- Some exposure to product work: a startup, club project, hackathon, or internship
- Clear writing and comfort talking with customers
- Available May through August 2027

Nice to have

- Figma or other prototyping tools
- A/B testing or experiment design
- Python or Tableau
- Interest in healthcare or B2B SaaS

How to apply

Apply on Handshake by November 15, 2026. We will be at BYU Career Services info sessions this fall; come say hi.

Sample job posting created for the Doorway hackathon demo. Wasatch Labs is a fictional company.
